The Connecticut Endangered Species Act

Chapter 495

General Statutes of Connecticut

In 1989, the Connecticut Legislature passed Public Act 89-224 “An Act Establishing a Program for the Protection of Endangered and Threatened Species.” The overall goal of the legislation is to conserve, protect, restore and enhance any endangered or threatened species and their essential habitat. As part of the Endangered/Threatened species program, the Commissioner of the Department of Energy and Environmental Protection (DEEP) can conduct studies of wildlife and plants to better understand their distribution, population, habitat needs and limiting factors which determine conservation and management measures.

One of the first steps in the implementation of the law required the Commissioner to develop lists of Endangered, Threatened and Special Concern Species. In 1991, initial lists were developed by DEEP biologists and then reviewed by groups of experts in their various taxonomic fields. The first State Endangered Species List became official in 1992. The DEEP is mandated to review the list every five years. Taxonomic Advisory Committees review the changes proposed by DEEP. Public comment is solicited, evaluated and incorporated into the listing process. The list is broken down into taxonomic groups: mammals, birds, reptiles, amphibians, fish, invertebrates and plants. Within these taxonomic groups the species are further categorized as being Endangered (E), Threatened (T) or Special Concern (SC).

According to the law:

“Endangered Species” means any native species documented by biological research and inventory to be in danger of extirpation throughout all or a significant portion of its range within the state and to have no more than five occurrences in the state, and any species determined to be an “endangered species” pursuant to the federal Endangered Species Act.

“Threatened Species” means any native species documented by biological research and inventory to be likely to become an endangered species within the foreseeable future throughout all or a significant portion of its range within the state and to have no more than nine occurrences in the state, and any species determined to be a “threatened species” pursuant to the federal Endangered Species Act, except for such species determined to be endangered by the Commissioner in accordance with section 4 of this act.

“Species of Special Concern” means any native plant species or any native nonharvested wildlife species documented by scientific research and inventory to have a naturally restricted range or habitat in the state, to be at a low population level, to be in such high demand by man that its unregulated taking would be detrimental to the conservation of its population or has been extirpated from the state.
